

TrustEpisode online and offline boundaries

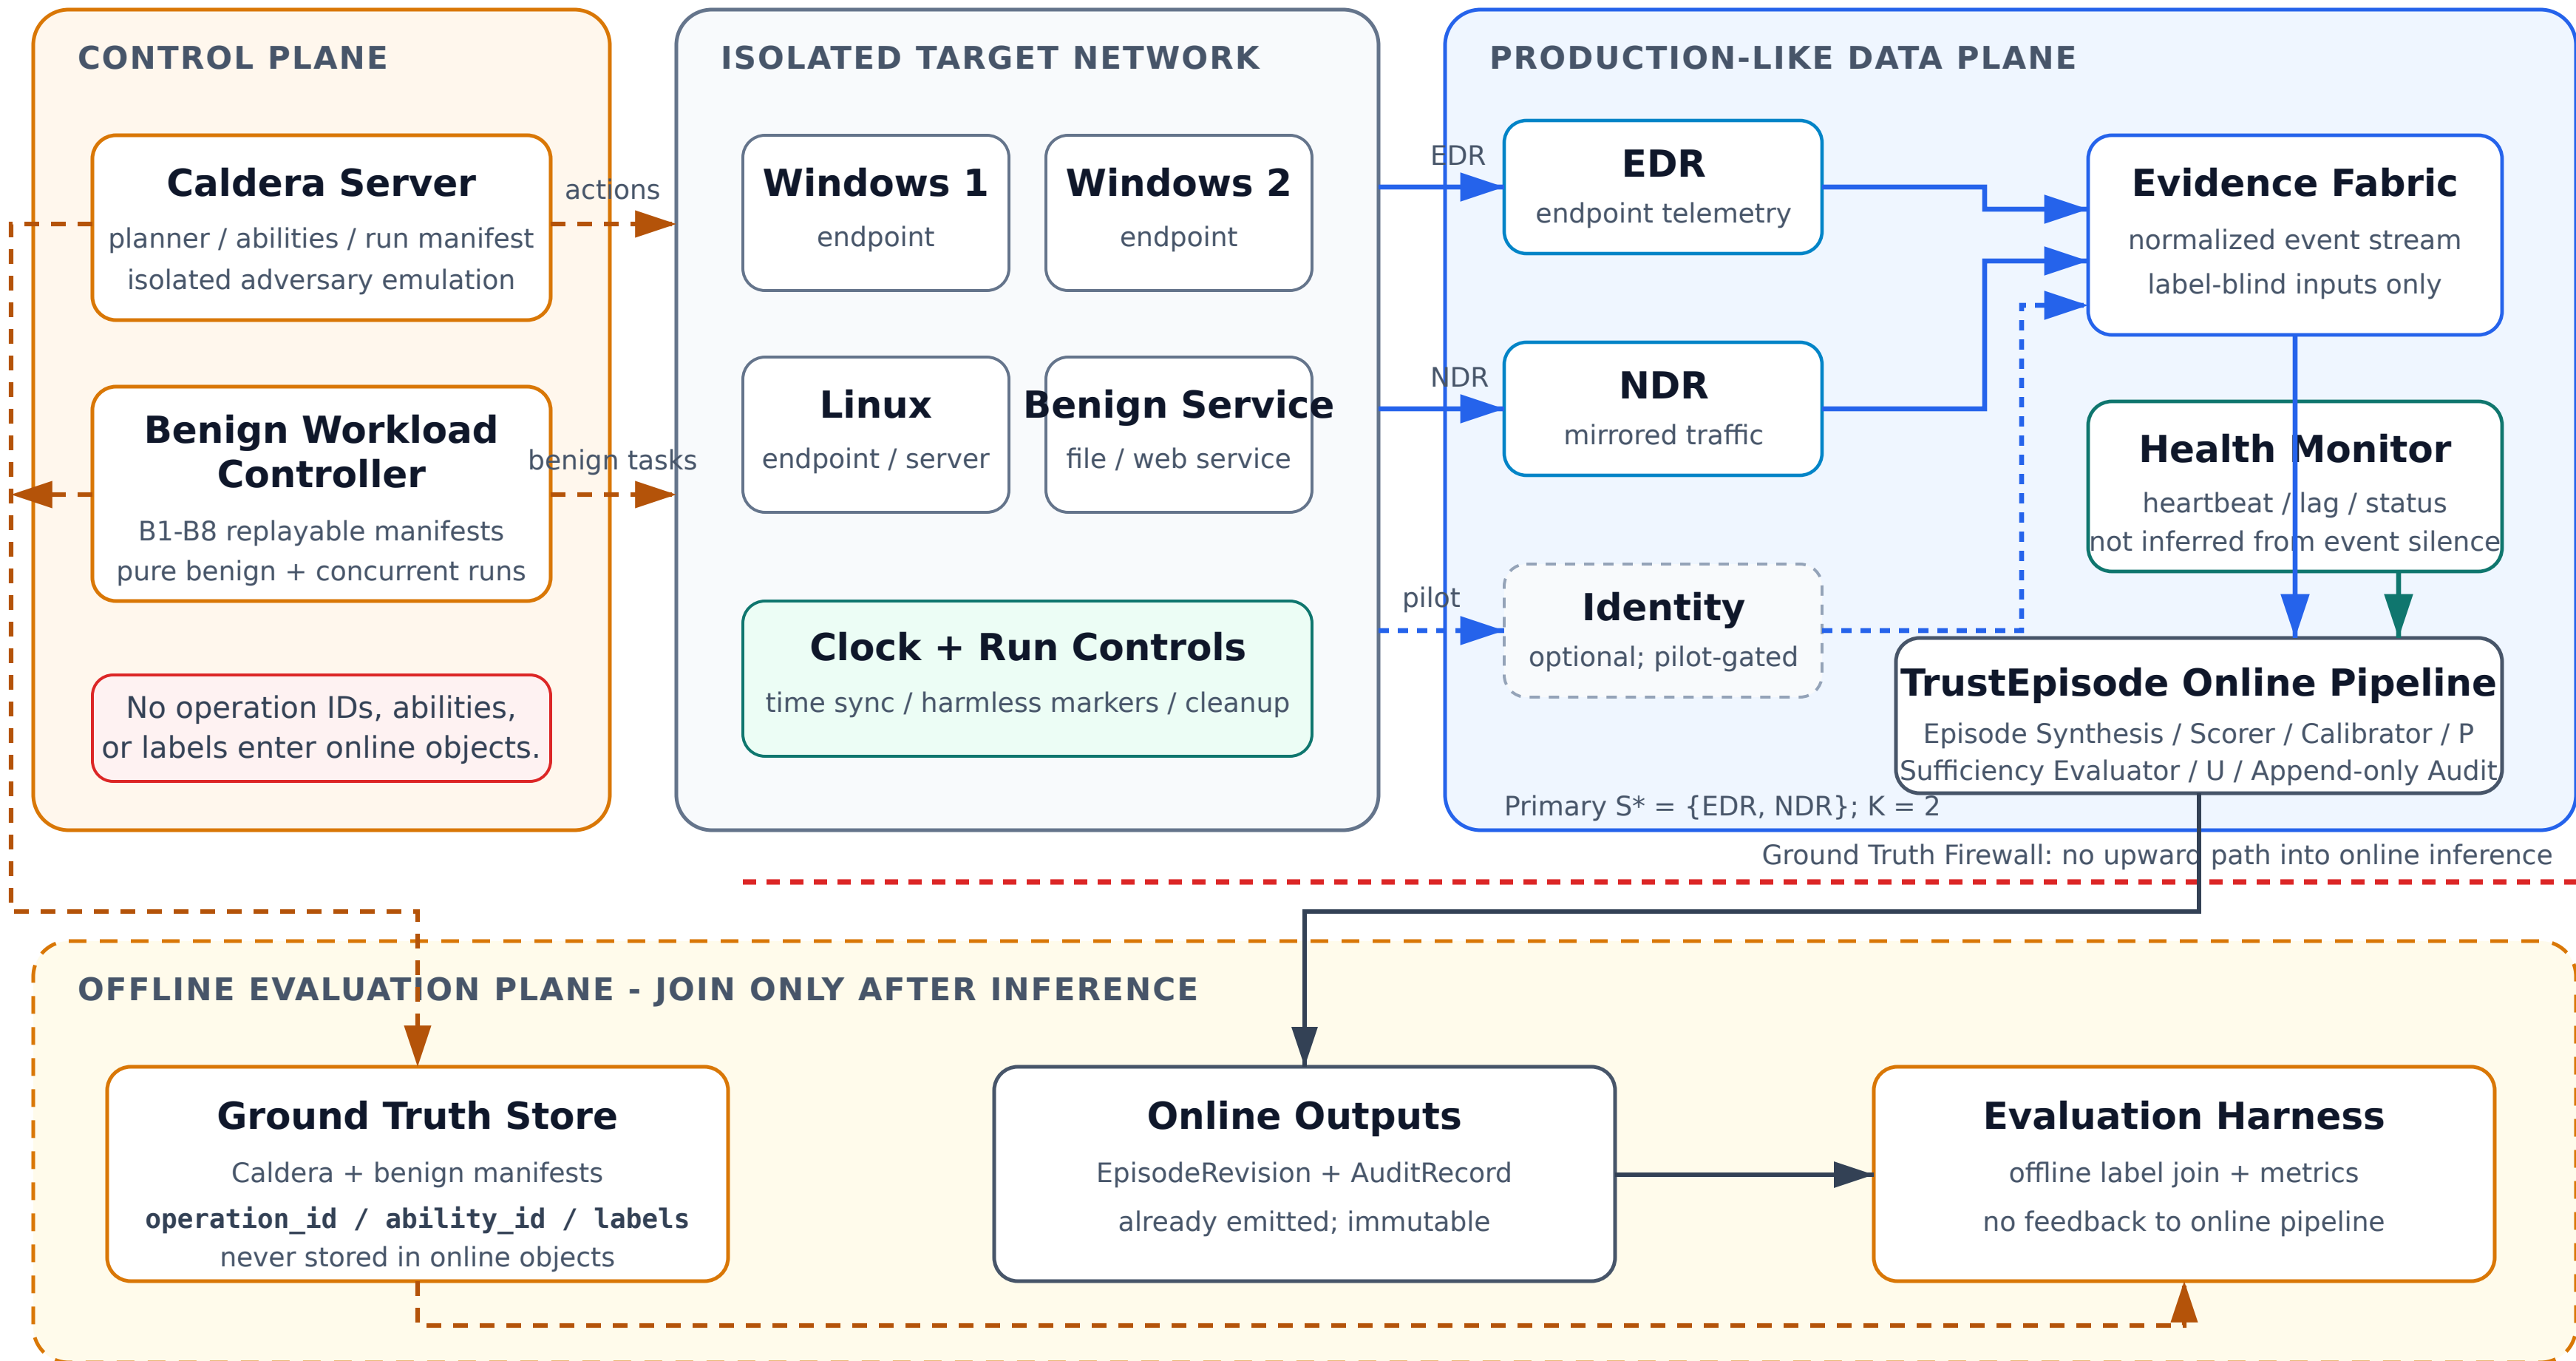

Deterministic episode synthesis and immutable revision lifecycle

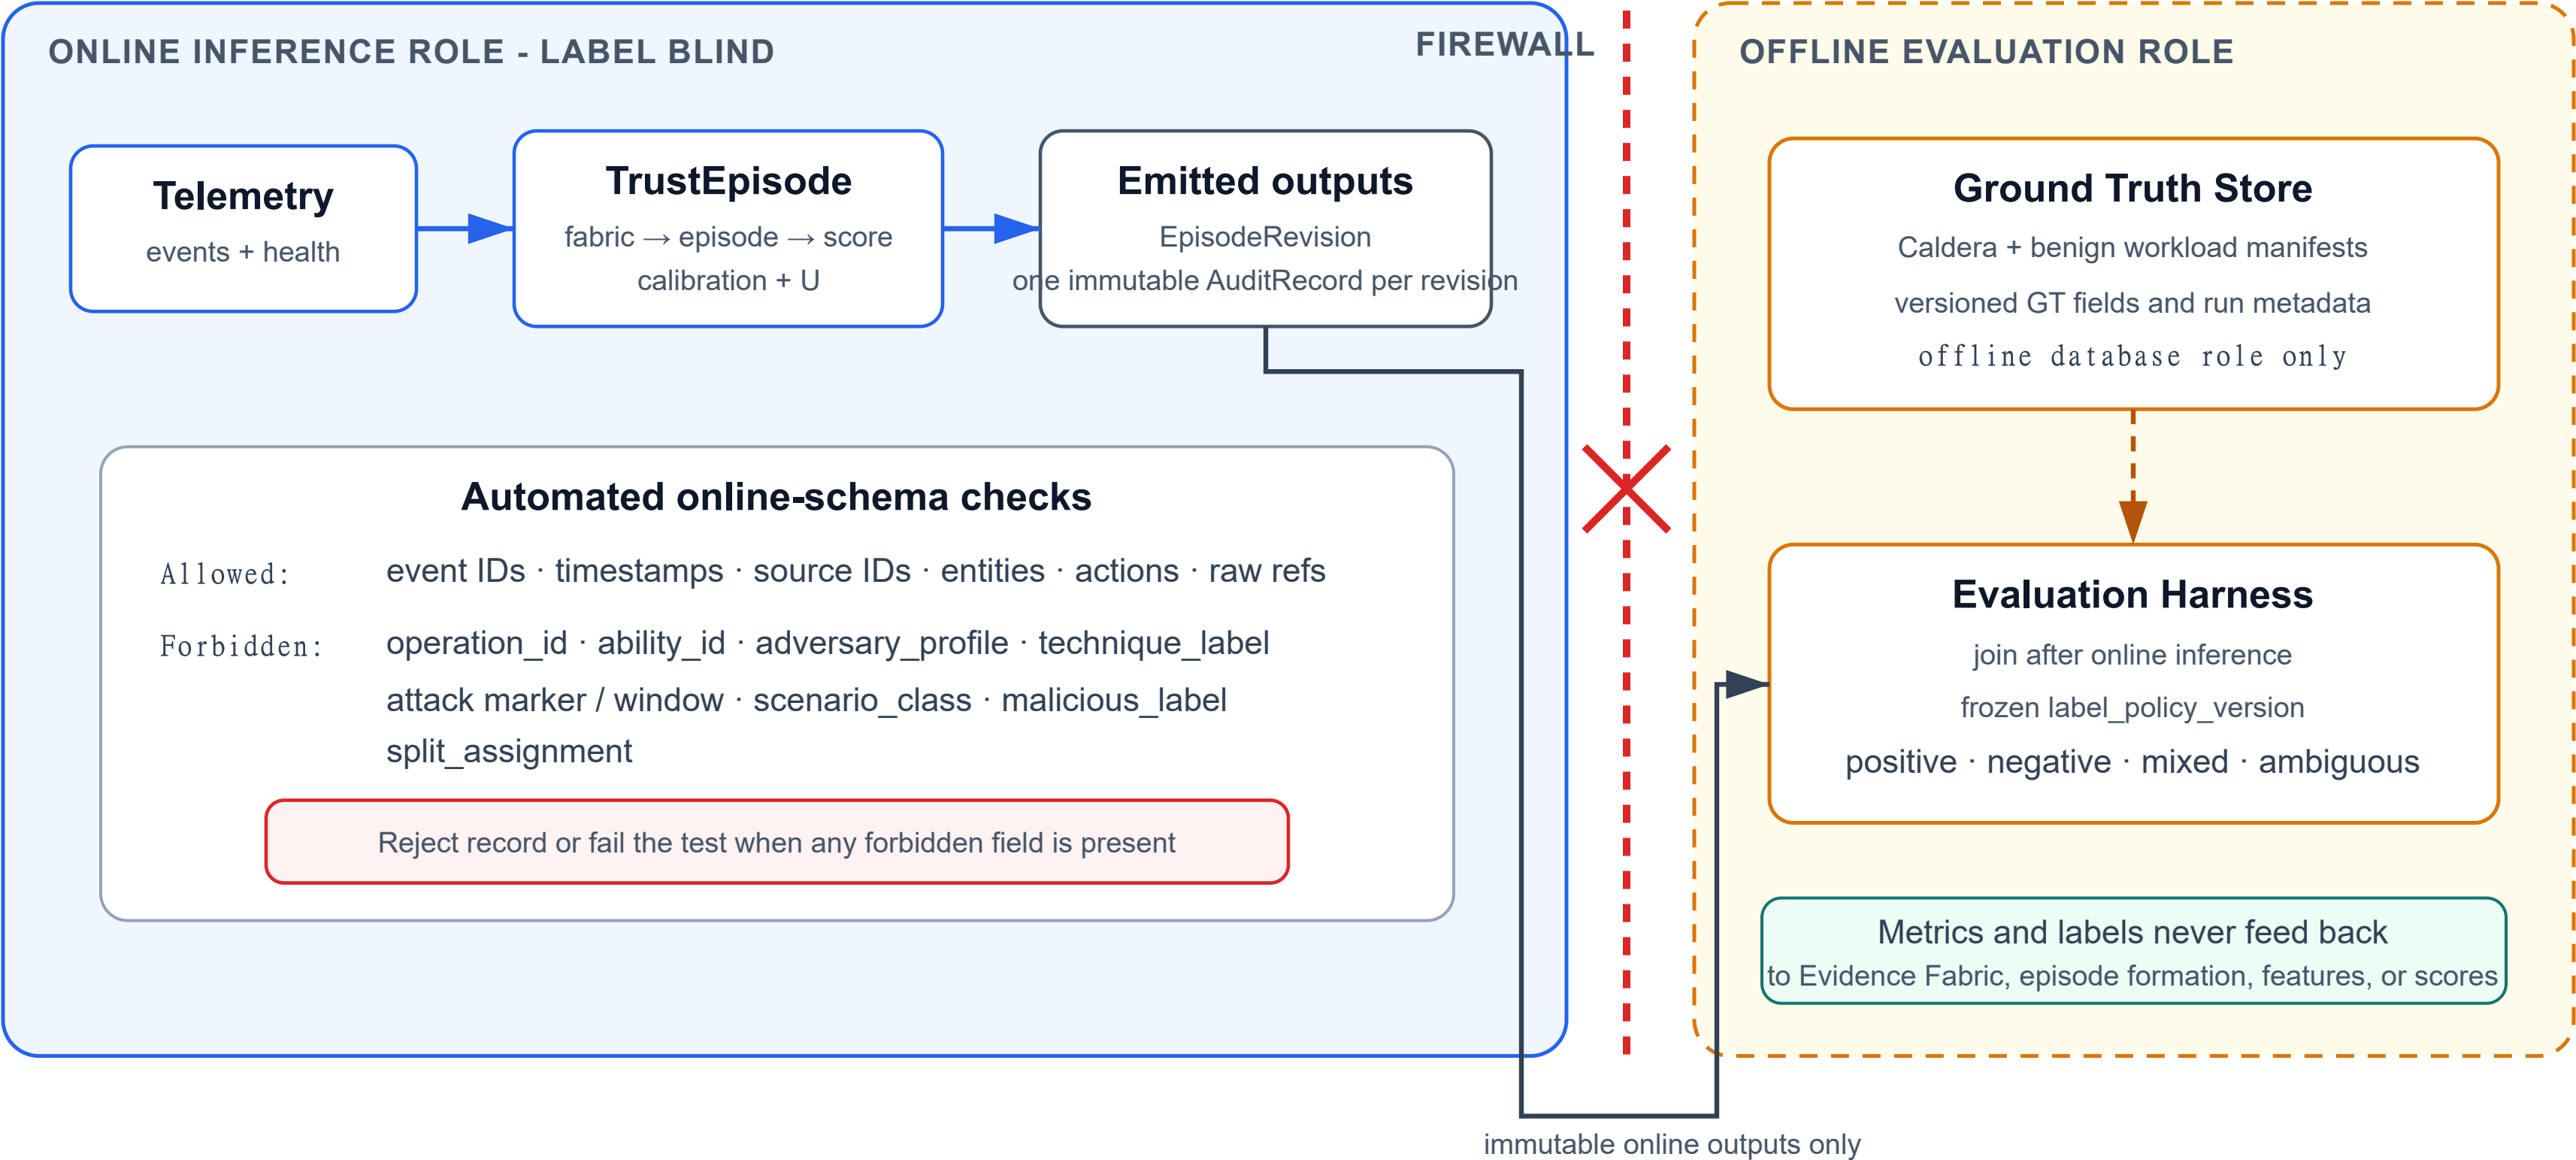

Scoped probability calibration and independent evidence sufficiency

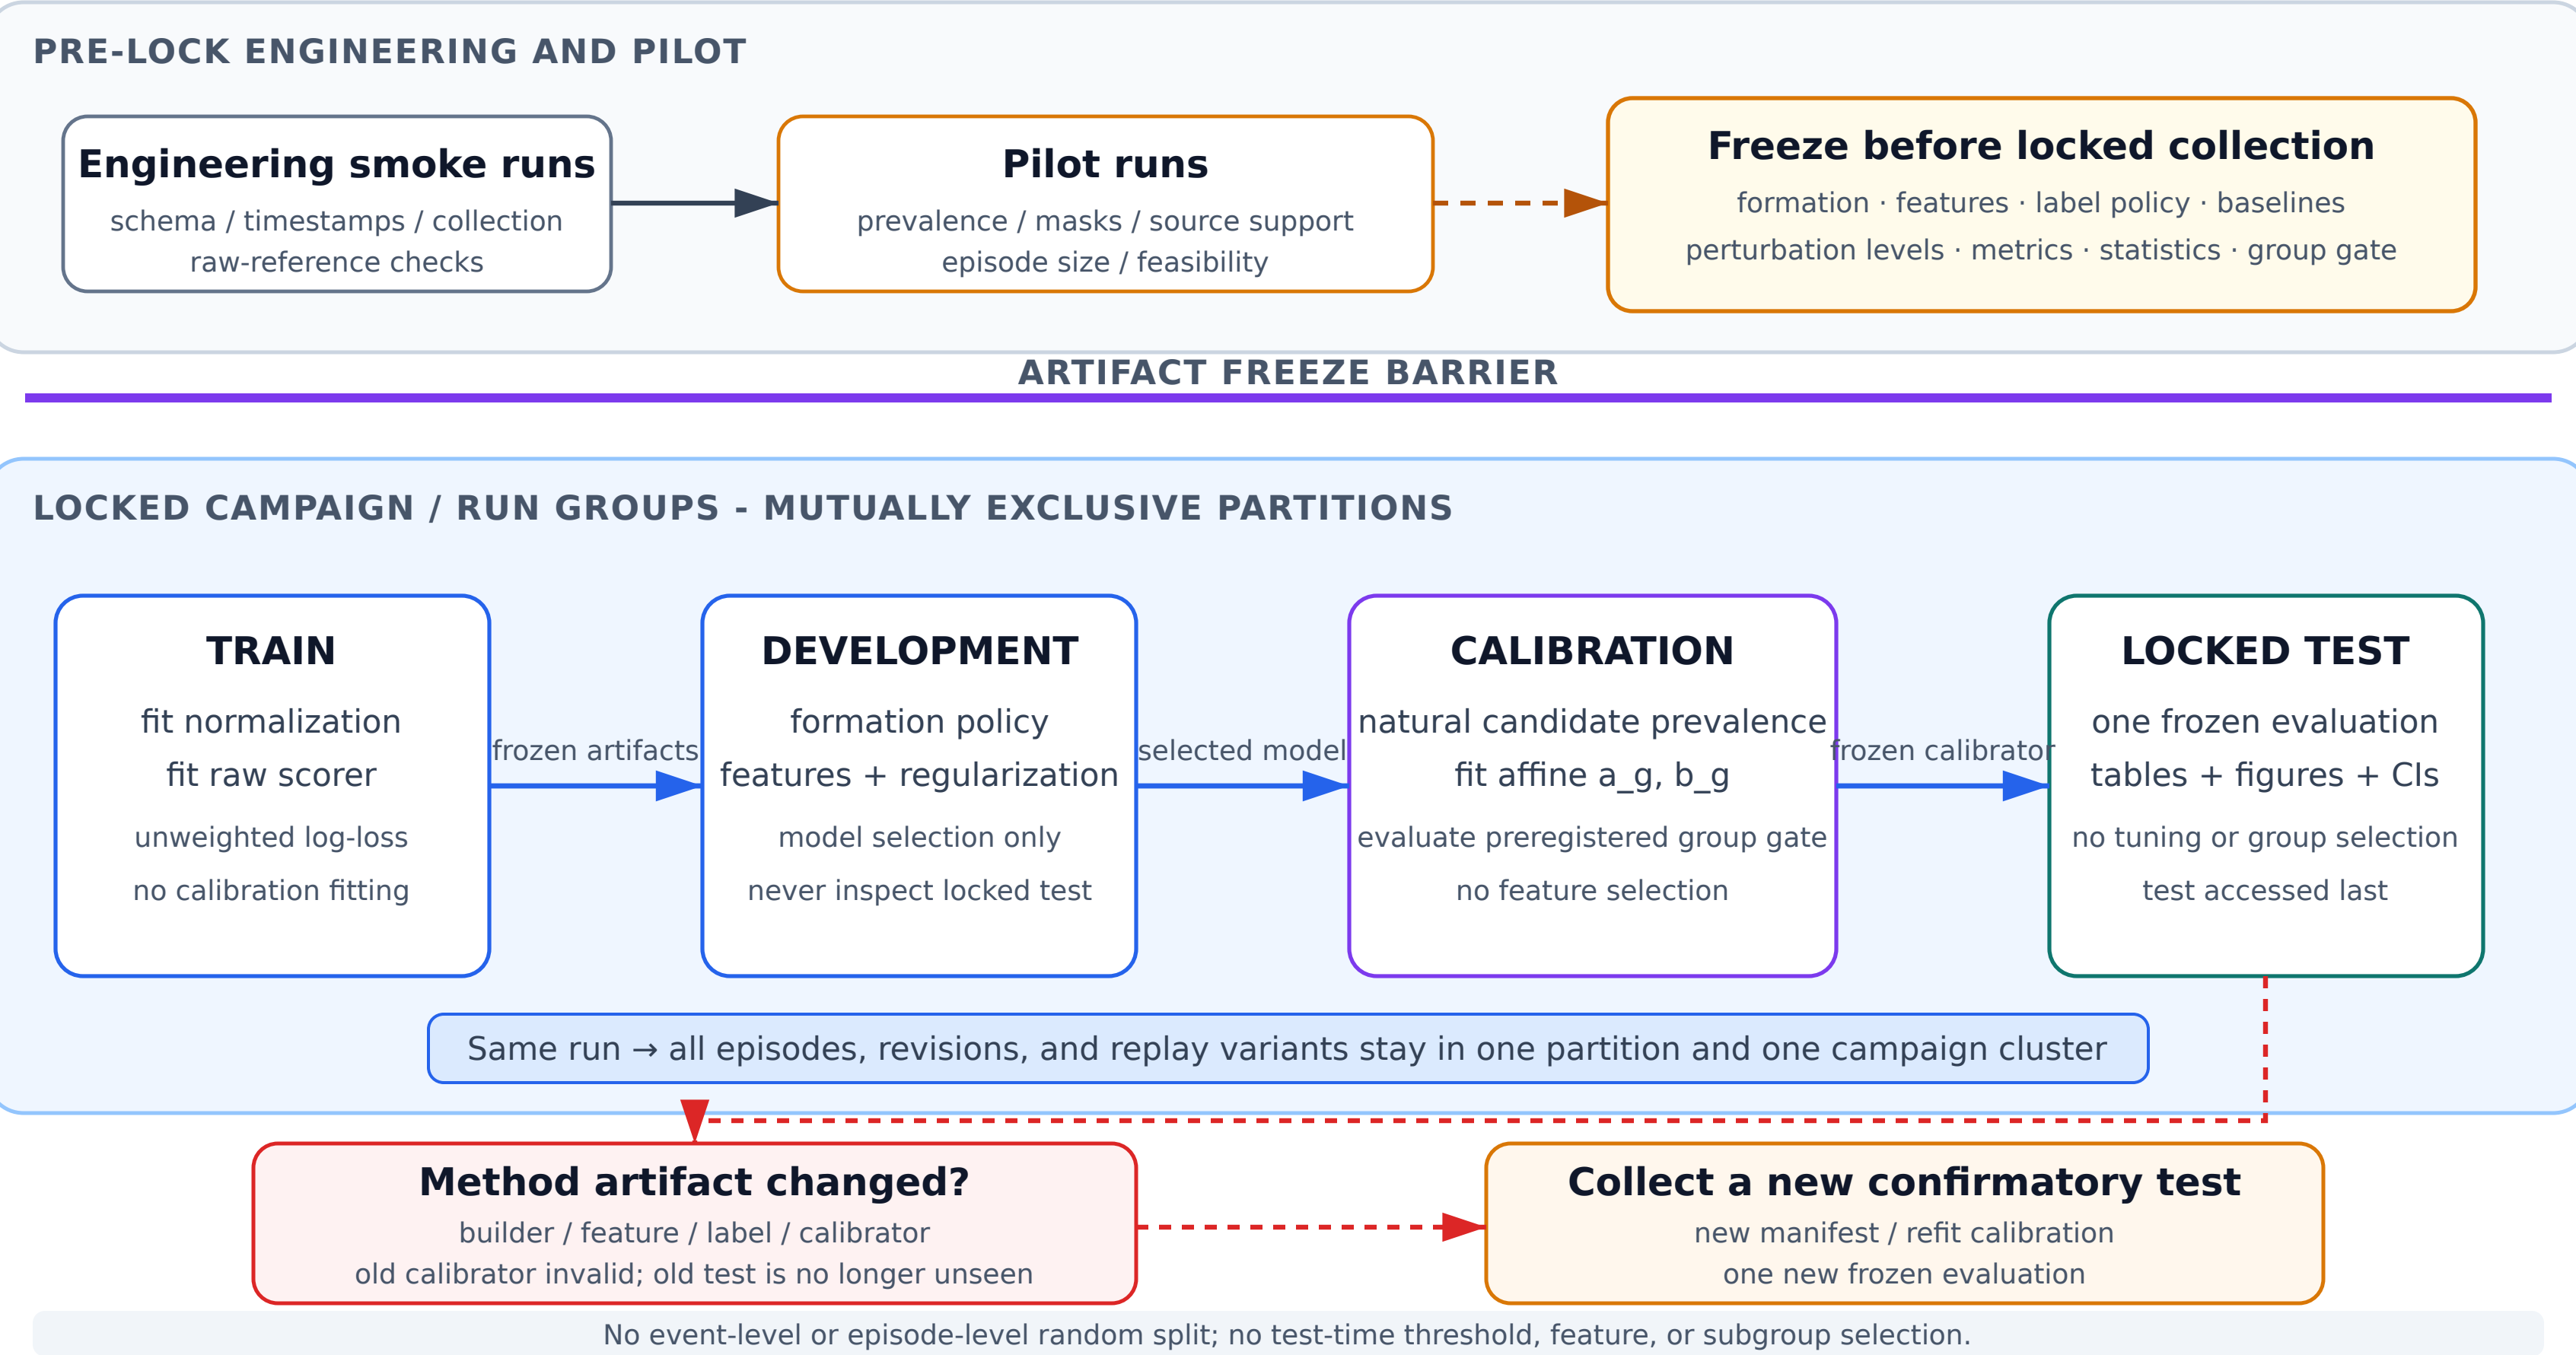

Controlled Caldera laboratory and production-like telemetry path

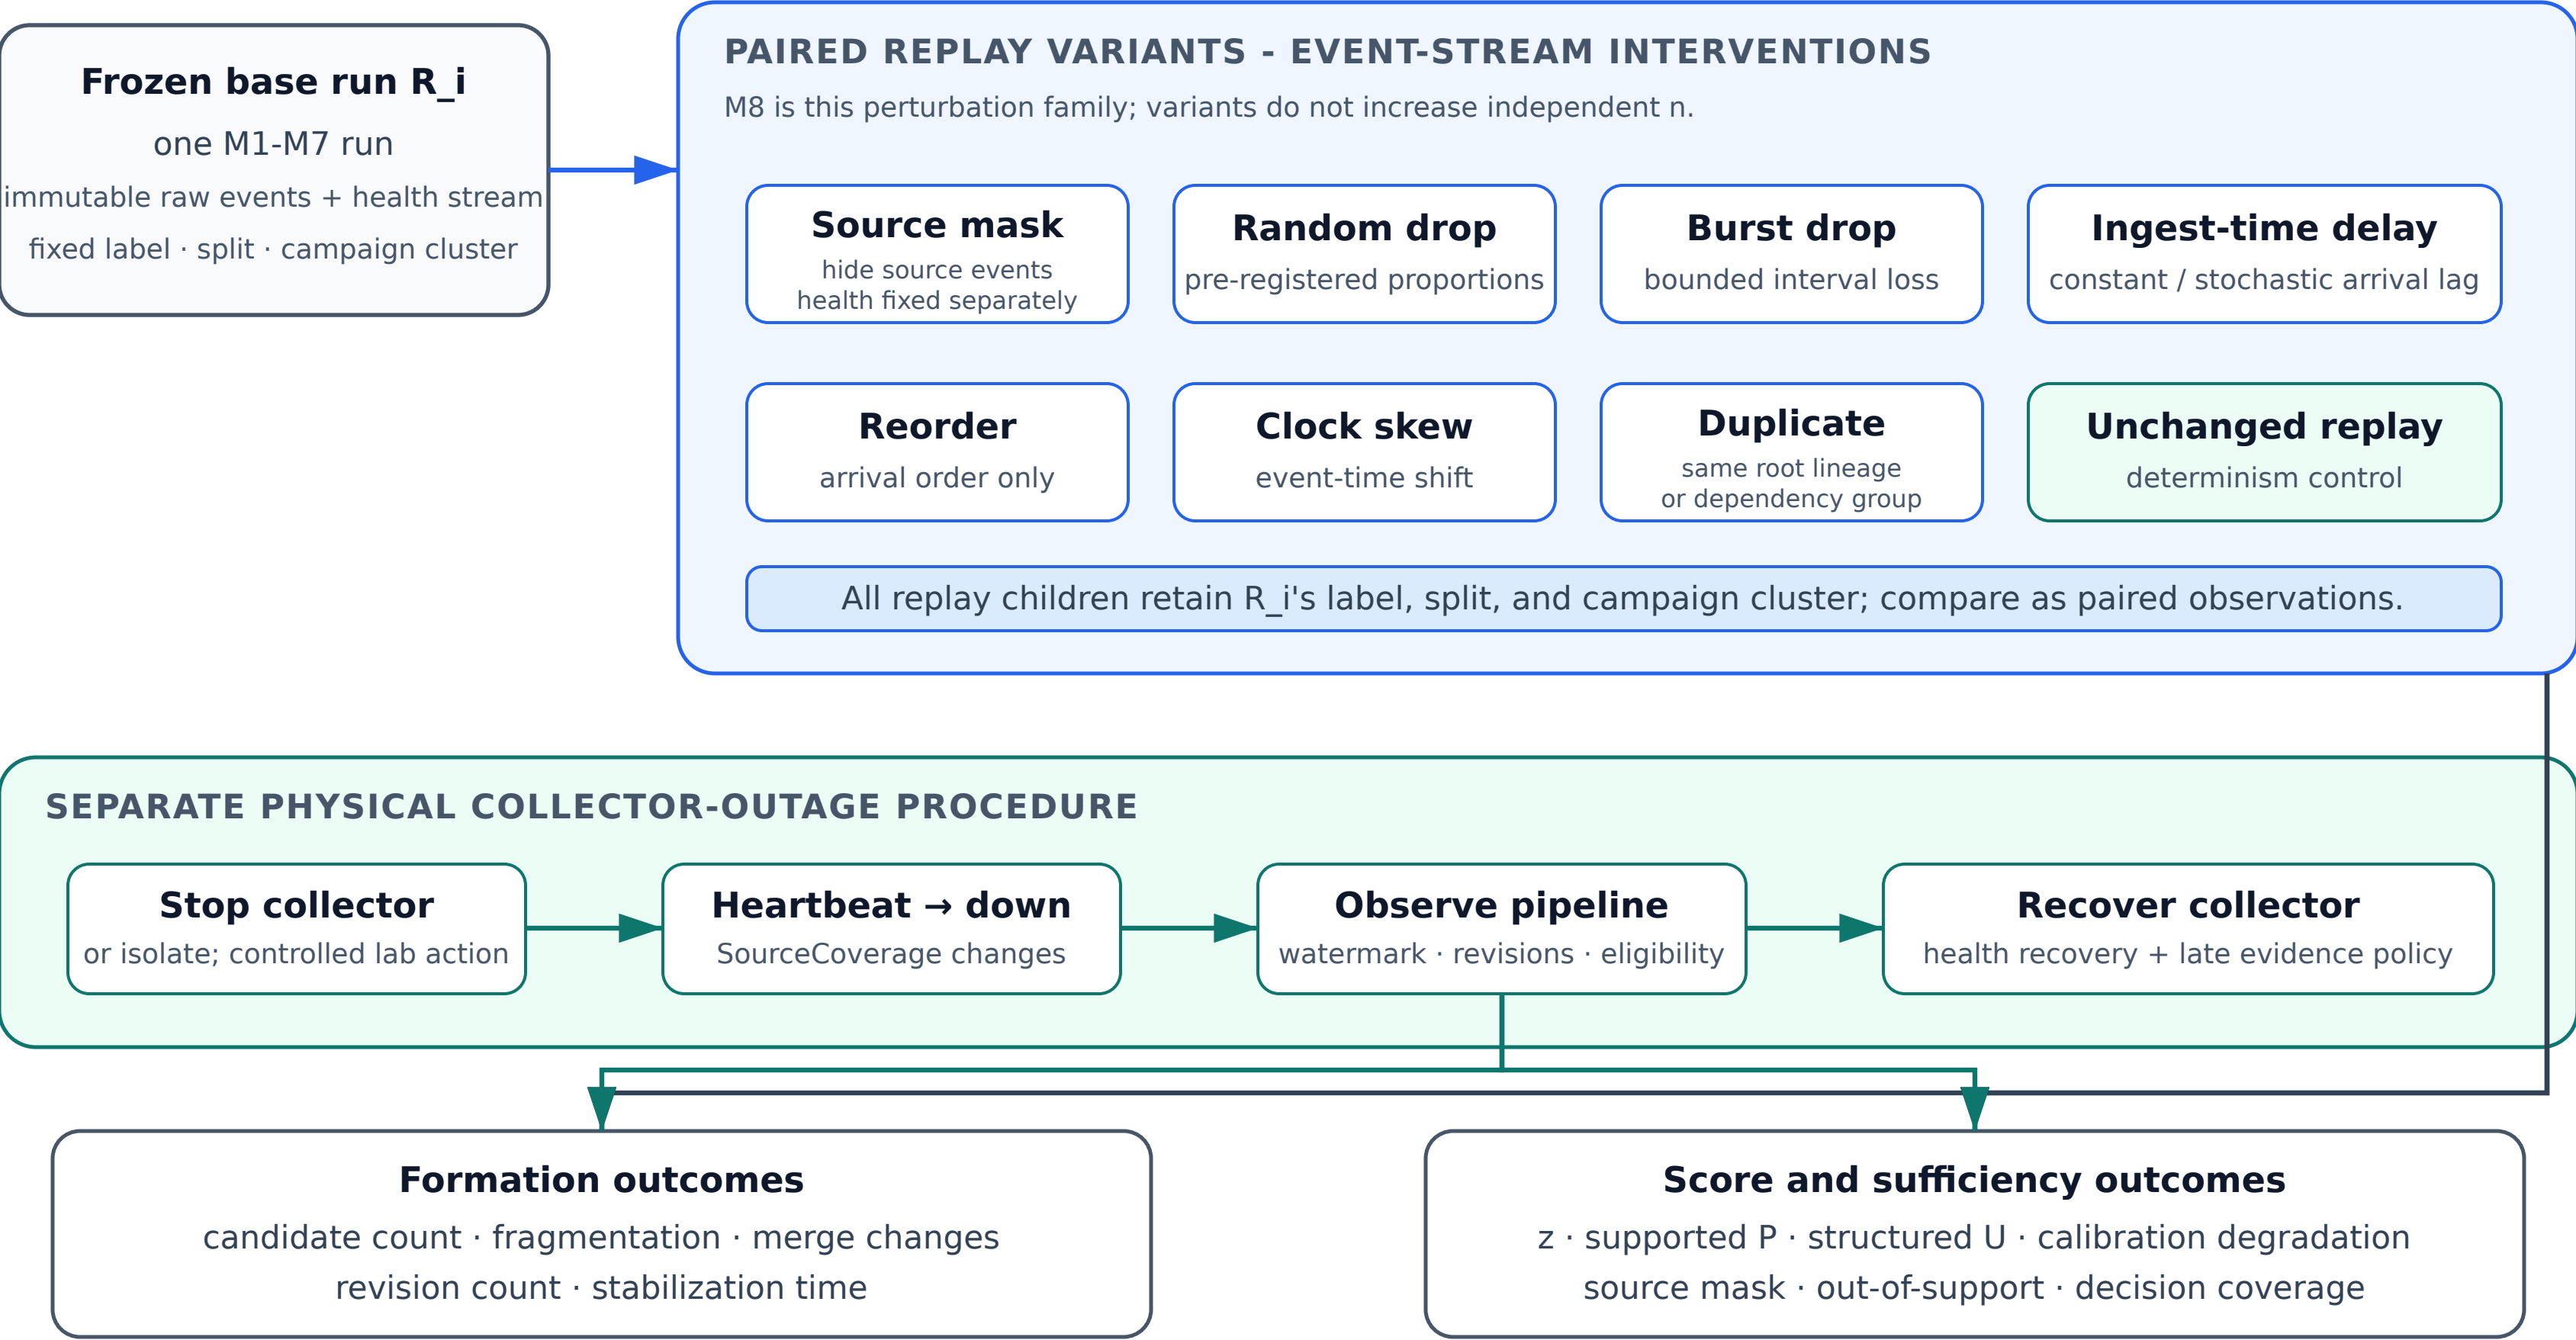

Ground Truth Firewall and offline label join

Campaign-level splits, artifact freeze, and one-pass evaluation

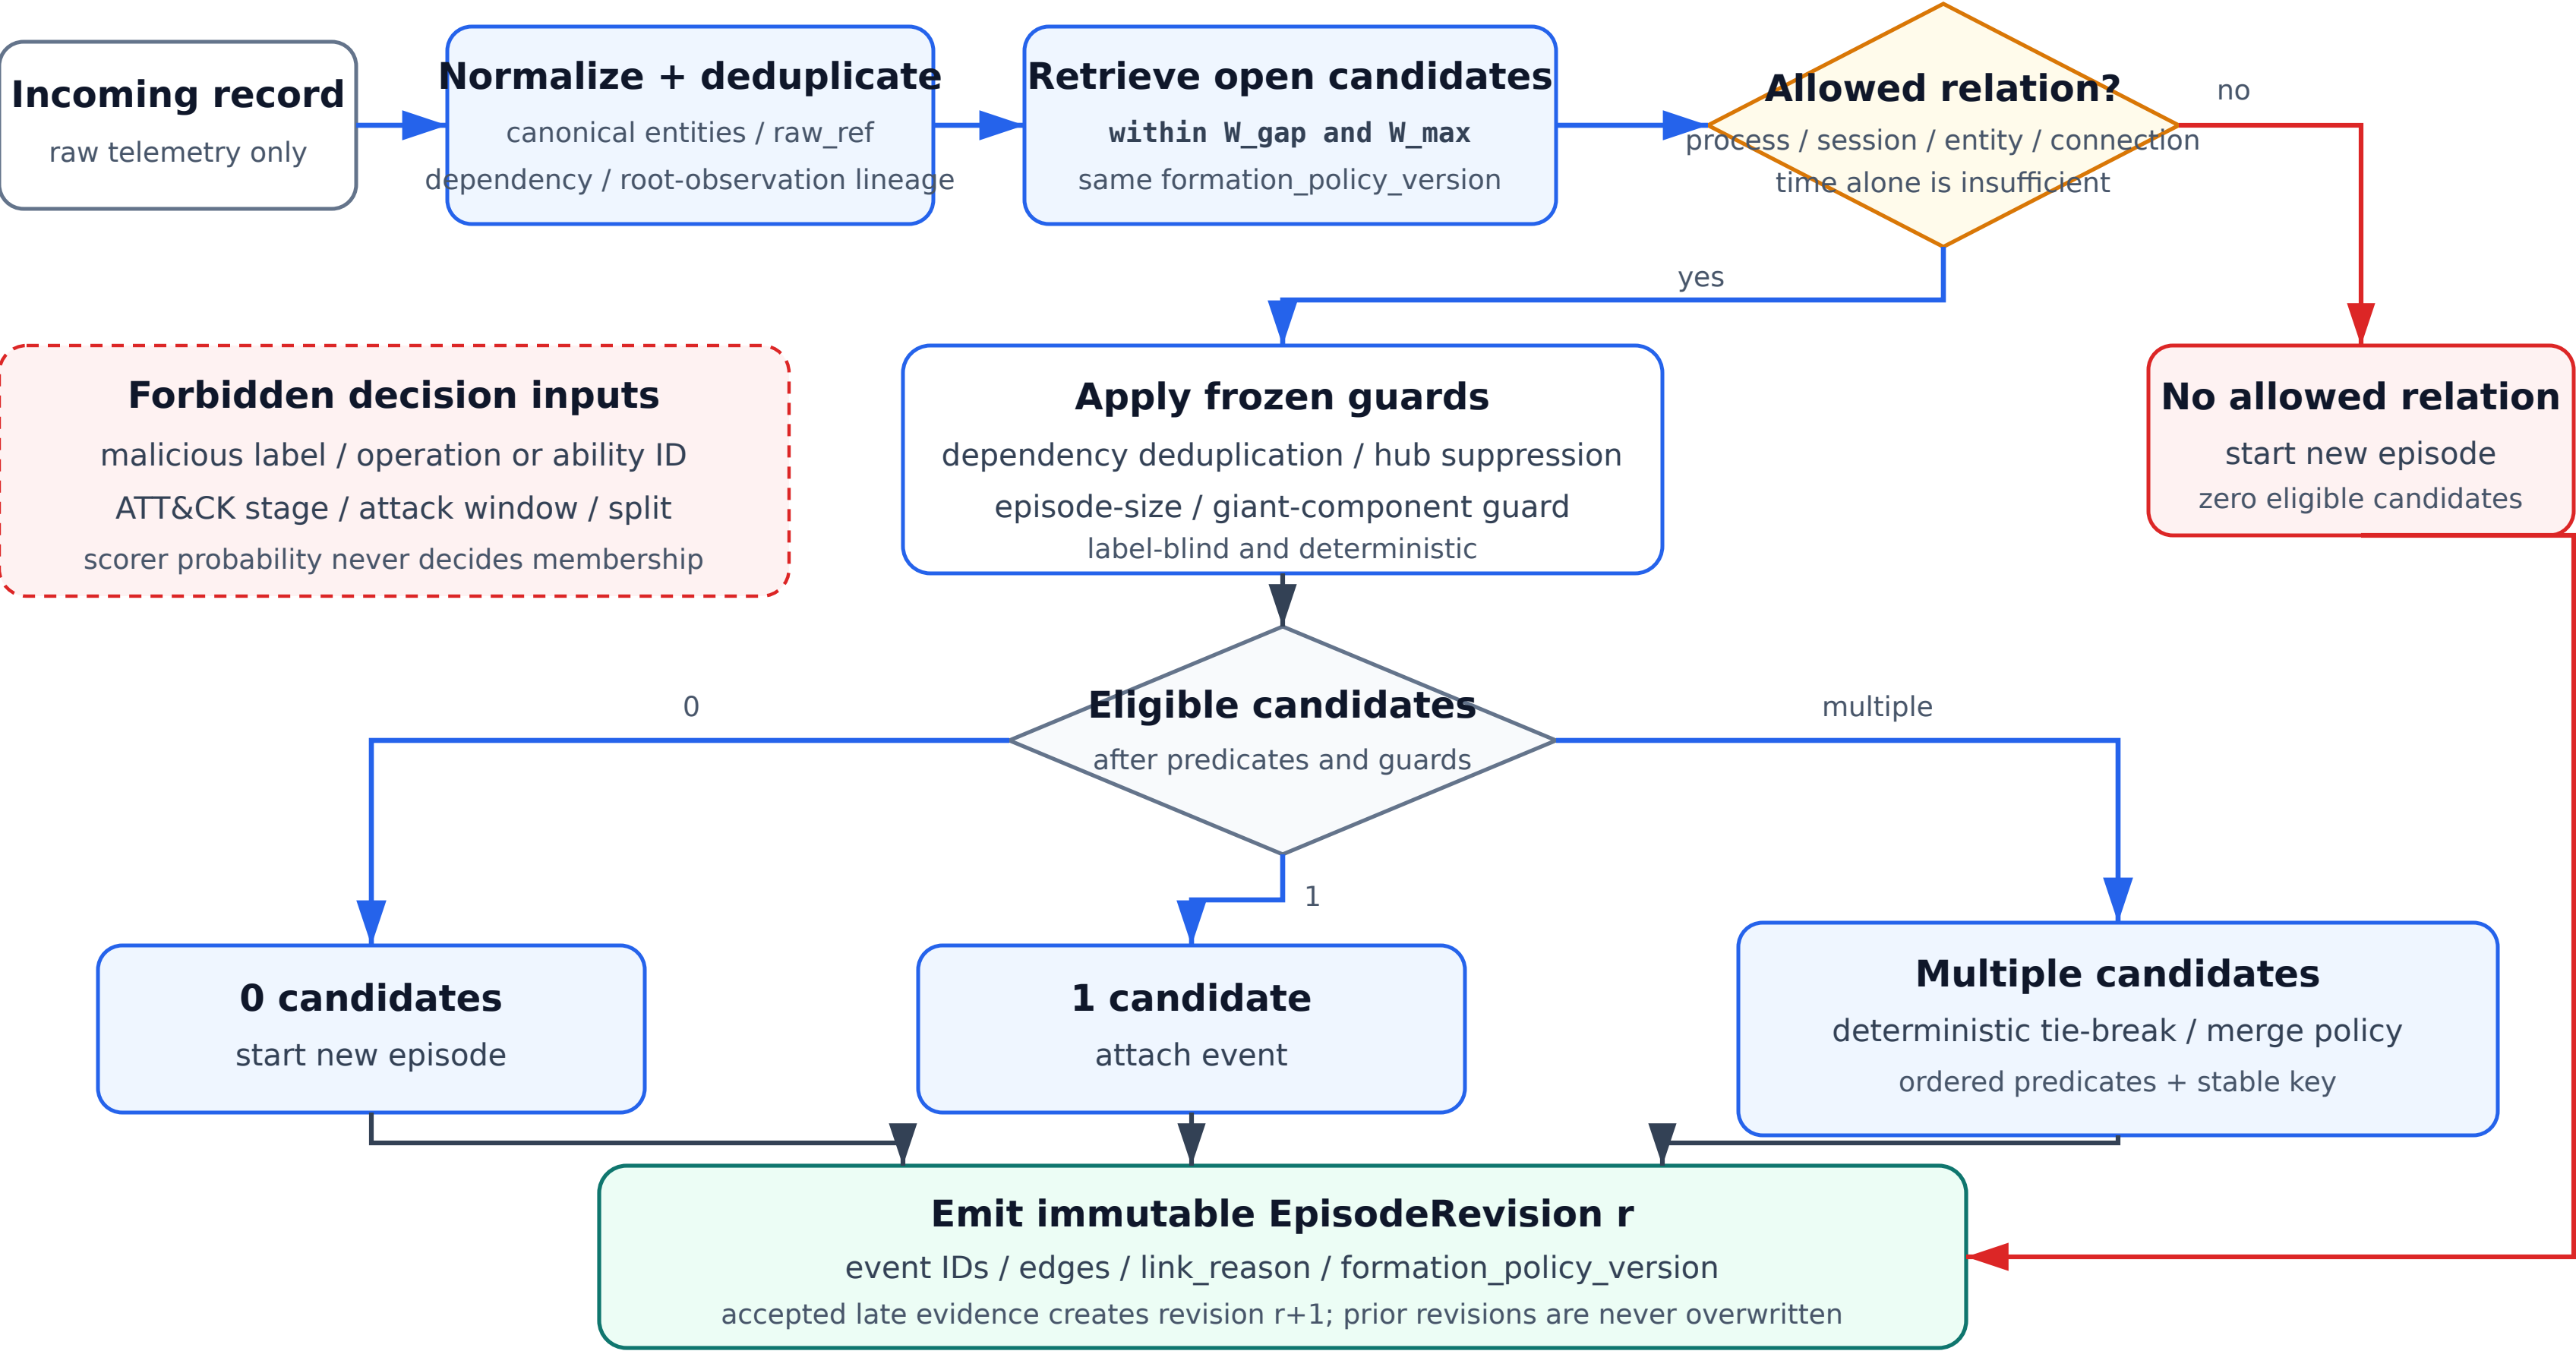

Paired partial-telemetry perturbations and separate physical-outage validation

Replay masking and physical outage answer different questions and are never pooled as one intervention.

Frozen label-blind attach-merge-start decision procedure

Calibration validity, group eligibility, and artifact invalidation
